ENCOUNTER GEOSYSTEMS

Interactive Explorations of Earth

Pearson Prentice Hall's *Encounter Geosystems* supplement gives students a new way to visualize key topics in physical geography using Google Earth™ and saves instructors time by providing well-organized, assignable exercises.

Each chapter of explorations consists of a worksheet and a corresponding KMZ file. The worksheets, available in a print workbook or online as PDFs, guide students through the placemarks, overlays, and annotations in the KMZ files and present thought-provoking exercises. The worksheets are perforated so that homework assignments can be turned in to instructors.

The Pearson-hosted *Encounter Geosystems* website contains the KMZ files and the PDF versions of the worksheets. The access code for the website is printed inside the front cover of the workbook. Students who don't purchase the printed workbook can purchase access to the *Encounter Geosystems* website to download the PDF worksheets and KMZ files.
